Hackathon Information

Tracks: You can apply to multiple tracks, but must ***choose one General Track*** (Most Creative or Technically Impressive).

The top 2 teams for ***Most Creative*** and ***Most Technically Impressive*** will be called up for live demos (4 teams total).

A winning project is one that brings technical novelty and creativity to solve an interesting problem.

Projects will be scored based on **Technical Impressiveness**, **Creativity**, and **Functionality.** Social proof (traction with users or social media) is also considered.

Judging rubrics will not be shared.

We advise against:

- Simple frontends with lackluster backends
- Projects with hard-coded functionality (judges will check)
- Submitting a pre-existing startup/project (see project requirements at bottom)

We encourage you to:

- Use AI coding tools ***heavily*** to build fast
- Be as creative as possible!

Cursor Credits

Cursor will be providing credits (Pro API) to all hackers. Be sure to attend the Cursor Workshop to redeem your credits

General Tracks ($3,500)

Most Technically Impressive: $1,250

Technical Runner-Up: $500

Most Creative: $1,250

Creative Runner-Up: $500

Guest Judges

Nemil Dalal, Visiting Partner @ Y Combinator

Alyssa Spagnolo, Director of Accelerator @ Foundation Capital

---

Best Use of AUSD ($1,500)

Agora issues **AUSD**, a fully reserved, institutional-grade digital dollar live on 10+ chains. As AI agents start buying, selling, and paying for things on their own, they need a dollar that moves as easily as an API call. That's AUSD.

This track goes to the best project built around **AUSD**, with a focus on **agentic payments** and **x402**. x402 is the open protocol that revives HTTP's `402 Payment Required` so any API, website, or agent can charge and pay per request in stablecoins. AUSD supports **ERC-3009 gasless transfers**, the primitive x402 payments are built on, so your agents can pay without holding gas.

The best projects will showcase AUSD use cases or flows in a creative and practical way that can be used in the real world.

To set up, follow these instructions:

1. Grab a wallet and testnet gas. We recommend **Base Sepolia**.
2. Mint free testnet AUSD from the faucet (10,000 AUSD per request).
3. Connect the **Agora Docs MCP** to your coding agent: `claude mcp add --transport http agora https://docs.agora.finance/_mcp/server` (or add it in Cursor).
4. Build!
5. Questions? Find the Agora team table.

First Place: $1,000

Runner-Up: $500

Resources: *Agora Docs*, *AUSC Deployments*, *Agora Docs MCP*, *Faucet Guide*

Track Judge

Allen Sanford, SWE @ Agora

Best Use of Gemini Prediction API ($1,500)

Gemini is a regulated crypto exchange and prediction market. Its **Prediction Markets API** lets you discover events, stream live odds, and trade event contracts on crypto, sports, politics, weather, and more.

This track goes to the best project built on the **Gemini Predictions API**. Market data is public, and trading runs in Gemini's sandbox with test funds, so your bots and agents can place real orders risk-free.

The best projects will showcase prediction markets in a creative and practical way that can be used in the real world.

To set up, follow these instructions:

1. Create a free demo account at the sandbox (comes with $100k test USD) and generate an API key.
2. Install the SDK (`npm install @gemini-markets/sdk`) or connect the Gemini MCP server to your coding agent.
3. Build!
4. Questions? Find the Gemini team table.

First Place: $1,000

Runner-Up: $500

Resources: *Prediction Markets Docs*, *API Reference*, *Demo Environment*, *TypeScript SDK*, *MCP Server*

Track Judges

Grace Reginato, Emerging Talent @ Gemini

Best Use of Ripple ($1,500)

The **XRP Ledger (XRPL)** is a fast, low-cost blockchain built for payments, with powerful features built directly into the protocol: native DEX, escrow, stablecoins like **RLUSD**, multi-purpose tokens, credentials, and new lending primitives (**Single Asset Vaults** and the **Lending Protocol**).

This track goes to the best project that uses XRPL to solve a real-world problem. Projects that combine multiple XRPL features into one cohesive product will stand out.

The best projects will showcase XRPL in a creative and practical way that can be used in the real world.

To set up, follow these instructions:

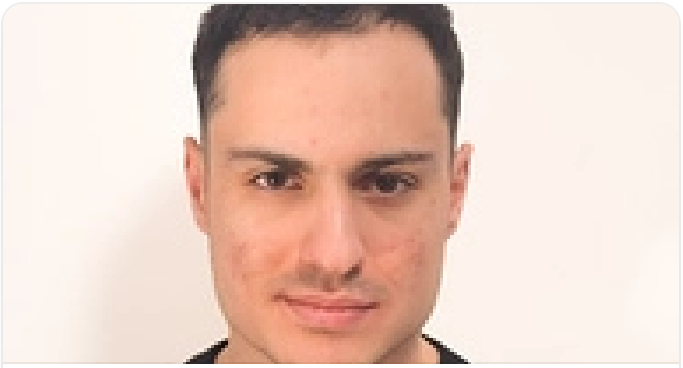

1. Get a free funded wallet from the XRPL Testnet or Devnet faucet.
2. Install the SDK (`npm install xrpl` or `pip install xrpl-py`) and connect the XRPL MCP server (`https://xrpl.org/mcp`) to your coding agent.
3. Build!
4. Questions? Find the Ripple team table.

First Place: $1000

Runner-Up: $500

Resources: *XRPL Docs*, *Testnet Faucet*, *xrpl.js*, *xrpl-py*, *AI Tools & MCP Server*

Mohammad Alam, SWE @ Ripple

Yashash Gaurav, Applied Scientist @ Ripple

YZi Labs Track: Build for Programmable Capital, Intelligence & Science (USD 1,500 + EASY Residency interview fast-track)

YZi Labs backs early-stage founders across Web3, AI and biotech. This track is open to any chain and any stack. Build something at the intersection of capital, intelligence or science: new financial rails, agents that can transact and be trusted, compute markets, AI interfaces, or tools for AI-native science. We're judging on whether the idea solves a real bottleneck and whether the team could keep building it after today.

Idea starters
• Stablecoin payments: merchant checkout, payroll, remittance, usage-based billing for software
• Agent wallets: give an AI agent delegated spending, permissions and an audit trail
• Onchain markets: tokenized assets as collateral, hedging or structured yield for RWAs
• Trusted agent infra: identity, authorization, tamper-evident logs for agents acting on tools or money
• Compute markets: routing, benchmarking or pricing inference across GPU providers
• Privacy-first memory: a personal context layer an assistant can use without leaking data
• Voice-first agents: spoken intent into actions in a specific workflow
• AI × Bio: lab data middleware, clinical trial tooling, consent and provenance for biological data

To set up, follow these instructions:

1. Grab a wallet and free testnet BNB from the faucet. Deploy on **BSC Testnet** or **opBNB Testnet**.
2. Connect the BNB Chain MCP server to your coding agent: `claude mcp add bnbchain -- npx -y @bnb-chain/mcp@latest` (or add it in Cursor).
3. Build!
4. Questions? Find the YZI Labs team table.

First Place: $1000 + a first-round interview for EASY Residency Season 5 (10-week program, up to USD 500K investment

Runner-Up: $500 + a first-round interview for EASY Residency Season 5 (10-week program, up to USD 500K investment

Resources: *BNB Chain Docs*, *Testnet Faucet*, *BNB Chain MCP*

Track Judge

Haley Huang, Investment Director @ YZI Labs

⏸ BONUS: Best Use of ElevenLabs ($250 + $3k Credits)

ElevenLabs is the leading AI audio platform, with lifelike text-to-speech, speech-to-text, voice cloning, sound effects, music, and real-time conversational **voice agents**, all available through one API. This bonus goes to the team that makes the best use of ElevenLabs.

Participants can claim their free ElevenLabs access through our automated Discord system:

1. Join the Discord server: https://discord.com/invite/VnBvbbcdEC
2. Gain access to the #coupon-codes channel
3. Click "Start Redemption"

4. Select the event and fill out the form using the email used for registration
5. The bot sends the unique coupon code

First Place: $250 + each team member of the winning team will earn 3 months of the Scale Plan ($1k Value).

Track Judge

Ray Zhang, Ellipsis Labs

BONUS: Best Use of Context.dev ($750 + $5k Credits)

Context.dev gives your agents live context from the web through a single API: answers, web search, scraping, website monitoring, and people and company data. This bonus goes to the team that makes the best use of any Context.dev API.

To set up, follow these instructions:

1. Sign up at context.dev and grab your API key.
2. Install the agent skill: `npx skills add https://docs.context.dev --skill context-dev --yes`
3. Build!

First Place: $750 + $5k Credits

Resources: *API Docs*, *Agent Skill*, *API Reference*, *Highlights*

Track Judge

Michael Ryaboy, MOTS @ Contex.dev

Project Requirements

- Projects must be built during the hackathon. Pre-existing startups or projects will not be allowed. Building on top of an existing product is
